INSTALL CONNECT INTEGRATE

INTEGRATE EDB POSTGRES USING POPULAR INTERFACES

EDB POSTGRES CONNECTORS

Integrate your application with EDB Postgres

EnterpriseDB supports a wide array of connectors to integrate your application with EDB Postgres.

Simplify Application Migration

A series of specialized database connectors for JDBC, ODBC, .NET, OCL simplify the migration of applications from Oracle databases to EDB Postgres Advanced Server and support the key functions of the Oracle® Client Interface.

Boost Your Connector IQ

EDB Postgers Connectors are available for JDBC, .NET, ODBC, and OCI. For each supported connector, EnterpriseDB offers comprehensive guides, including installation information, steps on how to create data source definitions, and reference information that details the supported functionality.

EDB POSTGRES

THE JDBC CONNECTOR

The JDBC Connector (a Type 4 Driver) provides connectivity between a Java application and EDB Postgres Advanced Server. The JDBC connector is written in Java and conforms to Sun's JDK architecture.

### EDB POSTGRES ADVANCED SERVER .NET CONNECTOR

The EDB Postgres Advanced Server .NET Connector provides connectivity between a .NET client application and EDB Postgres.

EDB-ODBC

EDB-ODBC provides connectivity between EDB Postgres Advanced Server and ODBC-compliant applications.

EDB OPEN CLIENT LIBRARY IMPLEMENTATION

Applications that are written to use the Oracle Call Interface (OCI) may be recompiled using EnterpriseDB's OCI connector to interact with an Advanced Server database server.
